

Student: Howard Sims Jr

## Basic Audio Engineering - Chapter #1 Quiz

1. Atmospheric pressure refers to:

**Your Answer: The density of air molecules around us at all times.**

---

2. Sound is made possible through the \_\_\_\_\_ of a sound source displacing the air molecules around it.

**Your Answer: vibration**

---

3. Frequency in terms of waveform characteristics refers to:

**Your Answer: The perceived pitch of a sound**

---

4. \_\_\_\_\_ is the primary frequency of a sound. The sound may have overtones or lower harmonics present however the primary frequency content is called this.

**Your Answer: Fundamental Frequency**

---

5. Sound travels at roughly \_\_\_\_\_ miles per hour.

**Your Answer: 740-770**

---

6. The tympanic membrane also known as the \_\_\_\_\_ is a flap of skin like material that acts as a diaphragm, receiving sound pressure waves and transmitting them the three bones in the inner ear.

**Your Answer: ear drum**

---

7. \_\_\_\_\_ is the study of how sounds are perceived by the brain.

**Your Answer: Psychoacoustics**

---

8. Timbre refers to:

**Your Answer: The harmonic frequency content that makes up the sound of a specific instrument.**

---

9. ADSR stands for:

**Your Answer: Attack, Decay, Sustain, Release**

---

10. Auditory \_\_\_\_\_ happens when one sound affects the perception of another sound by our brain either through amplitude or frequency content.

**Your Answer: masking**

---

11. Amplitude is the measure of \_\_\_\_\_ and is measured in \_\_\_\_\_.

**Your Answer: frequency, Hertz**

**Incorrect:** Correct Answer is loudness, decibels

---

12. Sound pressure waves are made up of two regions, \_\_\_\_\_ (high pressure region) and rarefactions (low pressure region).

**Your Answer: compression**

---

13. Acoustic \_\_\_\_\_ occur(s) when two sounds close in frequency are played together. The result is an audible phase interaction.

**Your Answer: beats**

---

14. The \_\_\_\_\_ is a snail shaped organ that contains reed-like fibers connected to hair follicles that vibrate at a resonant frequency.

**Your Answer: cochlea**

---

15. \_\_\_\_\_ is the measure of the amount of compressions and rarefactions (complete cycles) that occur in 1 second of time.

**Your Answer: Frequency**

# Assignment Grade

**Overall Grade:** A

**Instructor Notes:**

93% (14 / 15)

**Graded by:** auto

**Date Graded:** 2016-05-01 15:41:57

**Date Submitted:** 2016-05-01 15:41:54
